October 2026

RHEO

Turn any bin smart. See, decide and sort in real time.

Rocky · Shoaib · Saimoom · Sazzadur · Denilson

The Problem:

Recycling Breaks at the bin

517 kg

Too much waste

Recycled per person:
248 kg on average

People sort wrong

Four bins, unclear rules,
three seconds to decide.
Most people guess.

Recycling Fails

One wrong item can
contaminate a load
, so good materia
l ends up burned or landfilled.

The **waste** exists.

The **recycling infrastructure** exists.

The **decision** in between is **broken**

Meet Rheo:

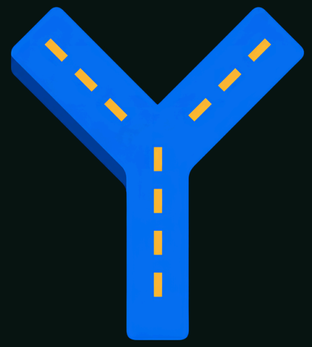

One module. Any bin.

How Rheo Works:

See

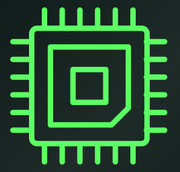

Decide

Sort

Rheo Knows before it overflows

Ultrasonic Sensor

Fill trend

Alerts

Any phone

Bins get emptied when they're full, not on a fixed schedule.

Who will use Rheo:

Built for shared Spaces

Schools
Campuses
Train Station

Housing Companies
Airports
Festivals

Offices
Malls
Hospitals

Supporting facility and cleaning teams:

- **Smarter rounds**
- **No overflowing bins:**
- **No hand-sorting**
